

**Amendments to the Abstract:**

Please replace the Abstract of the Disclosure with the following rewritten Abstract of the Disclosure:

The present invention relates to a film cutter assembly in which a blade housing slides bilaterally along a pair of rails. The blade housing houses a blade. An elongated rail base is coupled or integral with a pair of rails. The rails are formed of a material which provides an ~~attractive or adhesion~~ a cling property to ~~attract~~ hold the film to the rail and maintain the film in flat position before, during and after cutting. A double-side adhesive tape can be applied to a surface of the elongated rail base which is adapted for attaching the elongated rail base to a carton of film.
